OZ
Italian Company
Global Distribution
Multibrand Strategy

**Made-in-Italy
technology
and passion**

OZ Racing wheels are top-of-the-line where technology and style are concerned. Lightweight wheels designed to perform. 100% Made-in-Italy, they guarantee top performance and absolute quality.

**Cutting edge
styling**

Dynamic, urban-inspired wheels; quality and style crafted by OZ. A vast array of models, styles and applications, engineered to adapt perfectly to all cars currently on the market.

**Young, sporty
and aggressive**

Race-inspired designs, high quality materials, and innovative technologies meet in an exclusive series of boldly aggressive and dynamic wheels.

**The intelligent
choice**

MSW, the first brand distributed by OZ back in the early 80's, has always been synonymous with quality, safety, superior design and excellent value for money.

Our success in F1 is our guarantee of performance

CONSUMER SAFETY

WARNING: LIGHT, BUT STRONG!

The weight of the rim must be proportional to its resistance in structural terms. Otherwise - all things being equal - it would be possible to obtain very low weights, but insignificant resistance characteristics, and thus unsafe products for the consumers. In particular, the following performance index is necessary in order to calculate the actual performance of a rim:

WHEEL WEIGHT / MAX WHEEL LOAD

At OZ, quality has a specific definition:

- Win under the most difficult conditions, excelling during races, transforming the creative solutions engineered for the top racing teams in the world into useful technologies designed to improve the OZ after market product.
- Develop innovative design systems.
- Choose the best raw materials.
- Use certified manufacturing processes and products approved by the strictest Italian and international testing agencies.
- Develop and maintain a complex system of tests and checks, starting from pre-series on up to the finished product, to ensure durability under the most extreme conditions of use.
- Cultivate an ongoing process of technology transfer from racing to after market products in order to continue to innovate.

OZ is lean – a system that is constantly improving in the quest for the “perfect wheel”

“Lean”, along with the concept of the “integrated facility” is a business philosophy that places Quality and Customer Satisfaction at the core of every activity. The goal is to create the “perfect wheel”, a product made to the highest manufacturing standards and tested at each stage in the production cycle, based on the stringent guidelines set by external testing services (International Certification Services like TÜV and JWL) and by even stricter quality standards that OZ sets for itself in-house. In fact, all OZ wheels are TÜV certified and, in addition, pass another series of in-house tests that determine the overall quality of the wheel. Only the perfect wheel can win on the F1 circuit and on the gravel roads of the WRC, just the perfect wheel can be successful for many years: every day we work to stay on top of the world.

Only a perfect wheel can pass the in-house quality tests that are carried out daily:

- Test to determine the chemical composition of the raw materials.
- Ultrasound and X-ray testing to eliminate any materials with defects or impurities invisible to the naked eye.
- Air leakage test detects any air loss due to porosity. Wheels are submerged in a water tank, injected with air under 5-7 atmospheres of pressure and checked individually.
- Liquid penetrant testing uses a dye bath followed by chromatic contrast or ultraviolet light to detect cracks or superficial micro-leaks.
- Rotary flexion test subjects the wheel to the kind of mechanical stress a car experiences during extreme cornering, under maximum force conditions.
- (LBF) Biaxial Wheel Test, the most complete test that accurately simulates wheel behavior on the track. Conducted by applying radial and axial stresses that accurately reproduce the most extreme road conditions, such as brusque acceleration and braking, in the faithfully rendered simulation of the 35,000 km race around

the Nürburgring track. Testing with the LBF is not compulsory and is utilized by only a few OEM manufacturers (patented by the LBF Fraunhofer German research institute).

- Rolling test simulates the behavior and reactions of the wheel at the speed of 100km/h along a straight, under maximum load.
- Impact test (impact resistance) simulation of the stresses or impacts a wheel might experience on the road.
- The Dimensional Check verifies the size, circularity and concentricity of the wheel. Tolerances of only a few tenths of a millimeter are allowed.

Paint test

To ensure that OZ wheels maintain their quality over time, OZ subjects all paints and finishing processes to a series of extremely thorough tests:

- Adhesion test (DIN53151): Evaluates the degree of paint adhesion. Cuts are made in the painted wheel; the various layers must peel off in the most elastic way possible, without showing signs of brittleness.
- Salt Spray (fog) Test (DIN 50021): A test for anti-corrosion properties, during which the painted wheel is placed in a chamber sa-

turated with a dense saline solution (NaCl) for a period of 1,000 hours.

- CASS (Copper Accelerated Acetic Acid Salt Spray Test) (DIN50021): The painted wheel is placed inside a chamber saturated with a copper-saline-acetic solution (NaCl + acetic acid + CuCl₂ (copper chloride)) for a period of 240 hours.
- QUV Weathering Test (ASTM G53-93): Part of the wheel is exposed to alternating cycles of humidity and light - in the visible and ultraviolet range - for 700 hours.
- Chemical resistance test: The wheel is exposed to aggressive agents to evaluate the degree of corrosion in the area being tested.

OZ, the perfect wheel Don't miss out on a sure thing!

All OZ wheels outperform the safety requirements for TÜV certification and those set by the strictest international testing services. Don't miss out on a sure thing!

Always ask your tyre dealer for the TÜV certificate for the wheels you are buying; every OZ wheel comes with one, this is the only way you can be sure of the true value of your wheels.

OZTECH LAB

THE DETAILS FACTORY BORN TO MAKE LIGHTWEIGHT HIGH-PERFORMANCE WHEELS

This is the nerve center of the company, where the most elegant technological solutions for product development and the manufacturing processes take shape daily. It's where all the wheels that over the years have brought OZ its legendary fame were

SAFETY, QUALITY AND ATTENTION TO DETAIL

OZ, a plus in terms of safety.

Each of our wheels guarantees the consumer the highest degree of safety. OZ meets the stringent certification standards of the leading certification agencies, like Germany's TÜV and Japan's JWL. And that's not all: to ensure an additional layer of safety, OZ subjects its own products to even more stringent in-house testing. **There's nothing safer on the road.**

OZ, a plus in terms of quality.

In addition to its cutting edge production processes, typical of the most advanced companies, many treatments and technologies are developed exclusively by OZ. Our zero compromise approach means our commitment doesn't stop at bringing you the safest and best performing product on the market. "We are so obsessed with the quality of our raw materials that we prefer to smelt our own alloy at our in-house foundry, rather than source it externally".

IT ALL BEGINS HERE

The alloys used in manufacturing OZ wheels are the result of the inestimable experience gained in the world of racing. The same technologies and know-how go into producing wheels for standard production. OZ uses the lightest aluminum alloys (specific gravity 2.7 g/cm³) in manufacturing its' aftermarket

designed. Inside the OZ Tech Lab™ a team of engineers and designers is at work every day to develop exclusive, breakthrough technologies in a quest to find and test the most innovative materials, transferring all the know-how and experience acquired in more than 30 years of racing to its' aftermarket wheels.

OZ, a plus in terms of design.

Design is beauty and functionality, style and inspiration. OZ's has a name: racing. Young designers and highly-skilled engineers work closely every day in the OZ Tech Lab™, whether they're designing wheels for the F1 race track or for regular street use.

OZ, a plus in engineering.

In addition to the most avant-garde production technologies, like HLT (High Light Technology), forging and low pressure casting, we offer the PLUS of special heat treatments engineered by OZ, all designed to achieve the proper balance of lightweight, strength, and flexibility.

OZ, a plus in customization.

Thanks to its COLORS PROJECT, it's possible to customize your wheels adding a unique touch of personality to your car.

THE OZ EFFECT

Design, quality and attention to detail make OZ wheels unique and unrivaled, able to transform the look of your car and ensure the highest levels of technical performance and cosmetic appeal.

(note: listed customizations are only available on particular products)

wheels and on some of its racing wheels, whether cast or forged. The material undergoes carefully controlled phases of structural hardening and aging to maintain its primary asset – light weight – and to improve its mechanical and technological properties.

DESIGN

Predictive engineering means forward-thinking design

From the creative idea to project development. The most state-of-the-art systems for computer aided analysis and design are available to the engineers at the OZ TECH LAB.

CAD and CAM programs run alongside CAE (Computer Aided Engineering) systems that make it possible to work from the pencil sketches made by OZ designers to initiate the wheel-building process.

Dedicated software based on FEM (Finite Element Method) codes leads the way to optimization of the geometric shape and choice of materials, while pointing out any critical factors in each project, virtually simulating fatigue tests that are able to optimize the style/weight/strength ratio.

Predictive engineering is also applied alongside the rapid prototyping technology that makes real time physical prototypes available, starting right from the virtual CAD model data.

CASTING

At a pressure of about 1.2 bar, the special casting process used by OZ optimizes the flow of liquid aluminum into the mold, resulting in a wheel that is structurally more compact, lighter and stronger, and cosmetically perfect.

HIGH LIGHT TECHNOLOGY

HLT technology combines light weight and the kind of strength needed to pass the most stringent tests.

Wheels made using HLT (High Light Technology) are crafted with technologies derived directly from experience at the highest levels of Formula 1 racing worldwide.

Thanks to the spun flow-forming process of the outer rim or the use of special technical and design solutions borrowed from racing applications, mechanical characteristics similar to those of a forged wheel are possible, considerably increasing strength while at the same time reducing wheel weight.

FORGING

The perfect combination of strength, safety and suppleness. The mechanical and physical characteristics of a forged wheel are distributed uniformly over the entire piece, unlike in a cast wheel whose characteristics can vary from the center to the edge. This translates to greater strength, proper return of the material when exposed to impacts or other strains, and less likelihood of the wheel going out of true.

MAXIMUM TECHNICAL PERFORMANCE

SIDECUT EFFECT

The outside edges of the spokes are carved out. It's a technique used on racing wheels where the spokes are "unloaded" to further reduce their weight. The wheels appear longer and leaner.

CENTRAL LOCK

OZ offers a line of center lock wheels for Porsche applications. The fastening technique is taken from racing wheel technology. OZ is one of just a few after market wheel manufacturers to make center lock wheels.

UNDER CUT TECHNOLOGY

The outer rim of the wheel, along the area where the spokes attach, is carved out using a specific milling technique. The spokes appear longer and more aggressive.

GRAVEL DESIGN

The idea of leaving a fairly large center piece on the wheel originally grew out of a need to protect the brake disks from gravel thrown up by the driving force of the wheels; nowadays it has become a favorite styling element on rally-inspired vehicles.

EXTENDED HUMPS - RUN FLAT

The shape of the bead seat contour is optimized to prevent bead breaking on run-flat tires in situations when tire is punctured. Run-flat Tyre Technology is recommended with wheels identified as "EH2+" but wheels identified as "H2" may also be used.

MAXIMUM COSMETIC PERFORMANCE

OE CAP READY

Pre-fitted to allow replacement of the center cap with the manufacturer's original.

CONCAVE DESIGN

OZ offers a line of applications with a deep concave design for the rear wheels.

CERAMIC POLISH

A unique tumbling process that smoothes the surface of the wheel through polishing with ceramic beads. The result is a surface of the wheel in a mirror-like finish.

BOW CUT

Special processing removing material from the outer rim to reduce weight and lend a dynamic feel to the wheel.

SUNKEN PCD

Exclusive processing of the wheel center, near the lug holes, that makes it possible to reduce weight, accentuating the concavity of the wheel and enhancing its unique character.

FLAME SURFACING

A blend of shapes and lines that lends movement and a dramatic 3-D quality to the spokes, highlighting their aerodynamic look.

Zerouno by ItalDesign

STYLE IS A TRUE CALLING

AN EXPRESSION OF ITALIAN CHARACTER

Many great designers have found in OZ the personality required to complete their creations, drawing upon our collections and our ability to create innovative designs that, over the years, have been honored with many awards: the last one for Leggera HLT nominated best design of 2014 by Auto Bild.

Here are a few examples of prestigious projects where OZ was a design partner:

- Orbital Hybrid by Sbarro, custom OZ wheels
- Alcador GTB by Sbarro, OZ Mito Rosso
- Nemesis by Sbarro, OZ Crono HLT
- Aero by Sbarro, custom-designed OZ wheels
- Turbo S 20 by Sbarro
- Jaclyn by Sbarro, OZ Superleggera III
- Aria by Sbarro, OZ Atelier Forged Zeus
- Concept TS CodaTronca by Spada, OZ Botticelli III
- Quaranta by Giugiaro, OZ Botticelli III
- Namir by Giugiaro, OZ Ultraleggera HLT
- Ford Mustang by Giugiaro, OZ Palladio
- T1 by Caparo
- Antas by M, OZ modular wheels
- Evantra by M, OZ modular wheels
- Zerouno by ItalDesign Automobili Speciali, custom-designed OZ wheels

TRY THE NEW OZ CONFIGURATOR

With OZ's new 3D configurator, customizing your car is even easier and faster.

In few and simple steps, choose the right wheels for you and your car!

www.ozracing.com

BE SOCIAL

SHARE THE OZ EFFECT !!

Being social means always staying in touch with our clients and partners in order to be able to offer the best products and services possible, turning each suggestion into an idea or incentive for design, research and development.

The Paddock network was established in 2007. Today the Team numbers more than 400 sales outlets throughout Europe.

Network hand-picked by OZ

OZ chooses the sales outlets that have set themselves apart in terms of quality of service. If you'd like to visit one of the OZ Paddock stores please contact your local agent or official distributor (for more info go to: www.ozracing.com)

Loyalty to OZ

Paddock dealers are OZ ambassadors, top industry professionals who are able to represent our brand. OZ has been producing and distributing its wheels around the world for more than fortyfive years.

Shared OZ values

Quality, style, superiority, and professionalism are the key qualities that lead to becoming part of the Paddock Store Network. Values that are expressed throughout the workday, every day. OZ constantly monitors the Paddock network, evaluating skills and knowledge of products and services offered to the public.

Distinction in the world of auto parts

The Paddock Stores are a network of professionals specialized in the automotive sector. A network that has honed its skills to meet the needs of the market.

ATELIER

FORGED

*the excellence of forging,
the exclusivity of modular wheels*

Every OZ wheel is heir to a legacy of vivid emotions and technical advantages drawn from the world of racing.

Each OZ wheel carries in its DNA the experience gained over decades with the most illustrious racing teams and attests to the countless wins on race tracks around the world.

Today the possibilities with OZ wheels are far greater – they are unique and even more exclusive because they are artisan-crafted and engineered just for your car.

TAILOR MADE: EVERY WHEEL IS UNIQUE

Atelier Forged offers a “tailor-made” wheel configuration for those who want to stand out from the crowd and express their own personality with extreme customization.

Each wheel is different; every detail is engineered with the utmost precision; every milling operation stems from a unique design project, like the singular way each one of us expresses who we are.

CHOOSE DESIGN

FORGED MONOBLOC
The technologies and machines used to produce forged wheels are the same ones employed in making racing wheels. The forged shapes are sculpted on 5-axis mills in the racing department. State-of-the-art machines and precision tools are used to achieve otherwise unimaginable technical and stylistic results.

The lines of the wheel begin to emerge with each step in the milling process, in the same way an artist removes material to reveal the spirit of an object.

MODULAR WHEELS
Modular wheels make it possible to have the utmost in customization, with the option of choosing flange size, wheel camber, rim well width and lip depth.

The best way to perfectly customize your wheel and lend personality to your car: choose from any of the available finishes for the outer rim and flange, mix and match to your liking.

HLT FORGED

THE LIGHTEST
THE STIFFEST
THE STRONGEST

THE LIGHTEST WHEEL

Excellent balance between record-setting light weight, optimum rigidity and extreme strength all add up to improved handling and performance.

Designed by the same engineers who craft F1 wheels and manufactured in the OZ racing department, with the same technologies and machines used for racing wheels.

Forged aviation-grade, high-performance aluminum means superior mechanical strength and maximum uniformity of the alloy, making the wheel indestructible.

HLT technology applied to the forged billet makes it possible to enhance the wheel's mechanical properties and significantly reduce its weight.

The most tested wheel: no wheel meets the most demanding strength and quality tests, including the LBF test, like Superforgiata.

OZ[®]
R A C I N G

OZ Racing wheels are top-of-the-line where technology and style are concerned. Lightweight wheels designed to perform. 100% Made-in-Italy, they guarantee top performance and absolute quality. A collection with racing DNA and technological know-how derived directly from the race track.

I-Tech (Italian Technology, lightweight and top-of-the line quality),

Sport (monobloc performance wheels originated from our experience in F1 racing),

All Terrain (from SUVs to large-sized vehicles).

i-TECH

*we put the right emphasis
on power*

Technologically advanced super light wheels,
drawn directly from racing experience.
HLT technology ensures maximum
performance and total safety.

Design and engineering by OZ

Out of the partnership between two famous brands like OZ and SPARCO springs a new collection of automotive wheels. Italian design, high-quality materials, OEM construction technologies, for an exclusive series of wheels with a strong penchant for racing. The SPARCO product range is TÜV certified.

Podio

Sparco Podio, the new Sparco Wheels mesh design, has been designed for the medium-sized sports cars. This is the first wheel available 19" in Sparco Wheels family.

-  Monobloc, 5 Y-spokes.
-  Gloss Black
-  17" - 18" - 19"

Certifications:
Develop and design by OZ. Not produced in Italy. Quality Control by OZ. All OZ wheels are TÜV certified. The certificate is available upon request to the usual supplier.

Please verify on OZ B2B if the finishing and the specific application are available for your car.

Sparco Trofeo, in this 5 holes version, increases agility of medium sized sedans.

Trofeo 5

- Monobloc, 5 double-spokes.
- Fumè Black Full Polished
Matt Black
Gloss Bronze
- 17"- 18"

Certifications:
Develop and design by OZ. Not produced in Italy. Quality Control by OZ. All OZ wheels are TÜV certified. The certificate is available upon request to the usual supplier.

Please verify on OZ B2B if the finishing and the specific application are available for your car.

Sparco Trofeo 4: a young and aggressive wheel that brings its lightness to small and medium size sports cars in the 4 hole version.

Trofeo 4

- Monobloc, 4 double-spokes.
- Fumè Black Full Polished
Matt Black
Gloss Bronze
- 14"- 15"- 16"- 17"

Certifications:
Develop and design by OZ. Not produced in Italy. Quality Control by OZ. All OZ wheels are TÜV certified. The certificate is available upon request to the usual supplier.

Please verify on OZ B2B if the finishing and the specific application are available for your car.

The first Sparco 'mesh' design wheel.
Technology and racing aesthetics for
performance minded drivers.

Pro Corsa

- Monobloc, mesh design.
- Full Silver
Matt Dark Titanium
- 17"- 18"

Certifications:
Develop and design by
OZ. Not produced in Italy.
Quality Control by OZ.
All OZ wheels are TÜV
certificated. The certificate

OZ B2B WEBSHOP

A Simple and quick tool designed to help your business.
Select the car, check the wheels available, present the customer with the image of wheels fitted to the car, print an offer and order them in just one click.

- 1 Log in on the new OZ B2B Webshop and insert your username and password. (supplied by OZ)

- 2 Search by car or by wheel model.

- 3 Choose car's brand and model. You can also identify your customer's vehicle by entering the license plate directly.

- 4 Select the favourite wheel and show how it looks on the car. You can also find prices and availability here.

- 5 See the image and 3D animation of the wheel.

- 6 It is also possible to order merchandising items and original accessories.

- 7 Add the order to your basket and send it to OZ.

The new OZ B2B Webshop is PC and Tablet compatible.

The OZ B2B is active in selected markets internationally. Please check with your local distributor for details in your market.
